

UNIVERSITÀ DEGLI STUDI DI ROMA "FORO ITALICO"

Rome, 12 June 2015

Erasmus Partner Institutions

Dear partner,

We wish to inform you that, from this coming Fall, will start the European Master in Health and Physical Activity course (120 ECTS) a.y 2015-2016, a two-year program developed jointly with a number of European partner universities, with a joint recognition of credits and a joint title, a main goal of the Bologna Process.

This course, entirely in English, involves 3 alternative areas of specialisation – Children, Adults, Elderly -- each referring to both the general population and to special groups. The Faculty staff, numerous and diversified, includes some of the best European experts in the area.

First-year offerings in Rome are structured into four intensive teaching Modules of 15 ECTS each, over a 4-month time period:

1. *Biomedical issues in Health and Exercise*
2. *Changing behaviour towards a lifelong active lifestyle: from childhood to adulthood.*
3. *Movement Therapy and Physical Activity for Elderly and Special Population*
4. *Research Methodology*

The program may prove particularly appealing to students interested in Erasmus mobility, and if needed Bilateral Agreements can be revised or extended to that effect.

We are enclosing a leaflet and would appreciate if you could kindly promote the program with your students. High international participation is encouraged and forms of support will be available for qualified students.

Thank you for your kind cooperation, and please feel free to contact us for further information.

With best regards,

Prof. Daniela Caporossi
