

O&M engineer (Inhouse)

Messaritis Renewables (<http://renewables.messaritis.gr/>), a company active in Operating and Maintaining Photovoltaic projects all over Greece, is looking to hire an electrical engineer as part of its O&M team, for the team in its central offices in Athens.

Key responsibilities shall include:

- Monitor the proper operation of the PV power plants
- Provide back-office technical support to the field engineers for scheduled or unscheduled maintenance
- Interface with clients and other departments
- Manage efficiently subcontractors
- Organizing preventive and corrective maintenance schedule
- Compile technical reports on a professional manner
- Compile insurance reports for documenting damages

Necessary skills are:

- Experience of at least 2-3 years on PV construction projects, would be considered a plus
- Excellent organizational skills
- Good communication skills
- Out-of-the-box thinking, ability to combine complex data for reaching a conclusion
- Good level of English

We are offering a pleasant working environment and the ability to thrive through success. You will be working alongside a motivated team of engineers and technicians, getting plenty of challenges on organizing efficiently the workflow as well as optimizing the technicalities of proper PV maintenance.
