### Purpose

We are looking for a Software QA Tester to join our Technology Team in our Apifon office in Thessaloniki. The appropriate candidate will be part of a team responsible for the design and develop automated test plans and test cases for new functionality that ensure reliability, maintainability, and scalability of the web applications that are intended for marketing campaigns, bi and analytics.

### Main responsibilities

#### Essential Responsibilities

- Act as an application QA engineer for the Apifon's suite.
- Design and develop automated test plans and test cases for new functionality that ensure reliability, maintainability, and scalability
- Develop and maintain automated tests leveraging existing automation framework
- Serve as a member of a small and cohesive team focused on adding new modules and features to the Apifon's suite
- Serve as a key part of the agile development process and will be responsible for implementing manual, unit, functional, integration, acceptance and regression tests for new functionality and frameworks
- Follow an analytical process to identify test cases and use automation tools to create comprehensive manual and automated tests
- Collaborate well with developers, DBA, product owner and influence the end product

#### Desired Skills and Experience Minimum Qualifications:

- Familiarity with Quality Assurance methodologies
- Experience creating testing frameworks
- Experience with object oriented design
- Ability to clearly and concisely articulate ideas, thoughts, and opinions during requirements and design sessions with the development team
- Clear track record of careful test documentation and attention to detail  
Willing to take initiative; learn quickly, and be able to adapt to shifting priorities is essential
- Some experience with Agile/Scrum a plus
- Good knowledge of Unit testing

- Good understanding of AJAX, HTML5, CSS3 and AngularJS or equivalent JavaScript Framework
- Good understanding in Web Services (REST, SOAP, JSON)
- Good understanding of Java EE Architecture and Enterprise Web applications
- Excellent written and verbal communication skills
- Excellent analytical abilities and a strong intellectual curiosity
- Good time management and organization skills
- Ability to multi-task

### **Desired Qualifications:**

- University Degree in Computer Science or other relevant field
- Familiarity with unit testing and continuous integration best practices
- Familiarity with Quality Assurance methodologies
- Experience in Zend Framework, Spring, Maven, JIRA is a plus
- At least 3 years of experience in relevant job

### **Personal Characteristics:**

- Strong analytical and problem solving skills
- Ability to work independently and also as part of a team
- Excellent interpersonal and team building skills
- Highly self-motivated and methodical, with attention to detail
