-

This fantastic start-up are looking for a mid-senior developer who wants to have an impact on an amazing product. You will be using the latest web technologies to build a web application with a focus on the experience for the users. Participate in the design and code reviews while communicating with the team to determine the best solutions to difficult problems. You will take control of the development environment and be responsible for the entire production.

To be a successful candidate, you have the following qualifications and qualities

- A Bachelor's or Master's Degree in Computer Science, Computer Engineering, Information Technology, or relevant field
- Enjoys solving problems collaboratively with team members
- Passion for quality and consistency in software development
- Ability to articulate technical issues and solutions to a non-technical audience
- Solid analytical and technical problem solving skills
- Infectious personality to encourage an open and collaborative culture in software development teams
- A true generalist with a passion for new technologies and skills

Skills Required:

- Java Programming
- Javascript
- Knowledge of the web stack, networks and Unix administration

Highly desirable:

- AWS
- Search infrastructure (Lucene/Solr, Elasticsearch)
