

Mechanical Commissioning Engineer – Netherlands

Job Mission

- Perform mechanical installation/de-installation/ upgrade and other actions, as and when required, on machinery and customer location

Job Description

- Build mechanical components in a cleanroom environment
- Install all mechanic, pneumatic and electric components based on set procedures, documentation and diagrams
- In case of issues, find possible solutions individually, with the team, or with the Lead Mechanical Engineers
- Report any problems and overall daily progress to the Lead Mechanical Engineer
- De-install the drive laser systems for shipment towards the end customer, and install on site
- Work together with external partners to streamline the system's installation process
- Measure and examine all installed systems, ensuring their proper set up
- Upgrade existing systems to latest versions
- Support less experienced engineers in carrying out the same tasks
- Be proactive in proposing product changes that would simplify the installation and increase the efficiency and service possibilities, as well as provide feedback on received procedures
- Report on the product improvements
- Follow tool handling processes, report on hours worked and correct documentation when necessary

Background Requirements

- BSc in Mechanical Engineering
- Fluent English

Personal skills

- Proactive attitude and team player
- Hands on skills
- Service orientated with a structured way of working
- Readiness to move for full time employment to The Netherlands
