FPGA/ASIC Developer (medior/senior) Netherlands

The Company With almost 100 colleagues we provide services dedicated to the development of complex embedded systems for telecom and datacom applications. As a result of the way we work and the technology we use, we offer our customers cost-optimal and energy-efficient products with a very high availability, a long lifetime and the ability to perform in harsh environments. we have an open and direct culture. We are technology driven. Developers focus on "getting things done".
We have short lines of communication and there is a lot of room for autonomy driven by professionalism. Teamwork is key to our success. Teams are grouped around a customer project and work systematically to provide the right features and the right time to market. We pride ourselves in delivering our projects on time and on budget.
Why work as a FPGA/ASIC Developer:
– High End FPGA/ASIC Products
– Challenging work in design of complex products
– One of the top places in the Netherlands in FPGA/ASIC design
– A good Work/Life balance by flexible working hours (between 7 am and 7 pm) and up to 70% part-time and working remote (max 2 days)
– Good team spirit – Occasional traveling to the customer (also abroad)
– Opportunity for personal growth technical as well as managerial
The Job
● Develop high speed digital data processing blocks for FPGA or ASIC
