For the next possible entry date we search for our Development Department

Development Engineers Automotive Electronics

The company: power electronics, sensor and control technology, 300 staff, South Germany

Your degrees:

- Information Technology , or
- Communications Engineering

Your knowledge:

- Electrical signal processing and handling
- Data transmission technique / process
- In-vehicle networks (CAN, LIN)
- Electronics technology
- Industrial testing techniques
- Fluency (C1) in English (German is not a precondition but additional asset)

Your experience:

- Electrical measurement
- Design of analog, digital and controller-based circuits
- Embedded programming of microcontrollers (ECAD-/SW development tools)

Your tasks:

- Design and realization of electronic modules / assemblies from the specification via concept development, implementation, verification, tests until production launch
- Explorations of new circuits, components, technologies and their technical reliability

We offer: fair pay, pleasant atmosphere, challenging tasks, attractive social benefits

Your contact: Alexander Esslinger, post@ime-esslinger.gr, + 30 69 88 16 01 81
