

Intelligent Interaction

Aegean University

Researcher positions in Cultural Applications Development and Interactive Storytelling

Two researcher positions (junior or senior) are available at the Intelligent Interaction research group of the Department of Cultural Technology and Communication, University of the Aegean. The researchers will be involved in a recently granted 3-year, funded research project dealing with semantic representation of Ubiquitous Cultural User eXperience and Interactive narrative and storytelling. The project will design and develop a ubiquitous platform of augmented narratives for cultural routes based on travelogues.

We are looking for enthusiastic senior and junior researchers with academic background on fields related to the project and the wider research interests of the research group:

- Cultural metadata and Linked Open Data
- Semantic representation of Cultural User eXperience
- Mixed and Augmented Reality cultural applications
- Cultural narratives and storytelling

[II](#) is a recently established yet dynamic research group active in the intersection of Intelligent Systems, Human Computer Interaction and Cultural Heritage Management. It is looking for enthusiastic, dynamic, adaptive and flexible researchers with strong sense of teamwork and collaboration. Successful applicants will also be expected to contribute to the research and innovation activities of the group related to and beyond the project's scope.

If you're interested please [drop us a line](#), with a first cut-off date at the end of October 2018.
