

## Basic information

We are a technology consulting company providing services for top-tier companies of the Insurance sector at an international level, aiming to bridge the gap between Business and IT. Our services span software development, solution implementation and systems integration, enterprise architecture, business analysis and technical project management.

We believe in a culture with strong values. Our principles have been our guide through the years; to build teams that are talented, dedicated and highly motivated.

Our success is powered by our people's talent, mindset, and commitment to excellence. That is why we always strive to preserve our working conditions and environment at the highest standards, hiring the best people regarding not only technical capabilities but also personal traits.

By becoming a member of our company, you join a team of exceptional professionals, working in a supportive, spirited and non-discriminative environment. We have an open-door policy and communication is straightforward, supported by our simple structure, mutual respect, as well as our direct and honest feedback to each other.

You get the chance to advance professionally and be exposed to projects for market-leading customers, but above all, you will be supported and appreciated for your contributions.

## Responsibilities

As an entry-level IT Consultant, you will participate in projects that solve challenging business problems and deliver enhanced functionalities for our clients in the financial services industry. You will work in a supportive team environment with guidance from expert colleagues who will help you to harness your potential, improve your skills and advance your career.

On a typical day, you will spend time on one or more of the following activities;

- Design and Development of solutions using software development skills and techniques
- Gathering, analysis, and documentation of Business Requirements
- Testing
- User Training and authoring of Training Materials

## Basic Requirements

You must have a solid educational background (Computer Science, Informatics, Computer Engineering, Management Science and Technology, etc.), ideally combined with a post-graduate degree. Candidates with backgrounds in other numerate disciplines (such as Engineering, Mathematics, Statistics, Actuarial Science) will be also considered if they possess a genuine enthusiasm for technology and software development and are eager to apply their skillset to tackle and solve business problems.

Requirements for the position include:

- **Programming skills in at least one or more modern programming languages with a good comprehension of Object-Oriented Design principles**
- **Knowledge of SQL and Database Design principles**
- **Problem-solving attitude and attention to detail**
- **Team spirit and willingness to learn new things and acquire new skills**
- **Ability to work creatively and analytically**
- **Very good communication skills in written and oral form (in both English and Greek)**
- **Ability to meet travel requirements, when applicable**

### **Good to have**

- **Previous working or practical experience is not mandatory but is a plus**

### **Benefits**

- **We offer an excellent compensation package in accordance with your skills and experience as well as a Private Life & Health insurance plan.**
- **We are proud of our company culture which we continuously try to improve. We commit to providing you with a supportive, yet exciting multinational working environment with opportunities to work on projects for high-caliber clients, locally and abroad.**
- **We invest in your skillset development with comprehensive training programs**
- **You will have a clear development path and plenty of opportunities to advance and build a rewarding career in the Information Technology Consulting industry**
